

Android Phone or Tablet

This guide will outline how to connect to the **TAFESA-BYOD** (Bring Your Own Device) Wi-Fi network on an Android phone or tablet.

Who is it for?

Anyone with an active TAFE SA account and password can connect their personal laptop, phone, or tablet to the network. Have your account username and password ready.

Examples of a TAFE SA username:

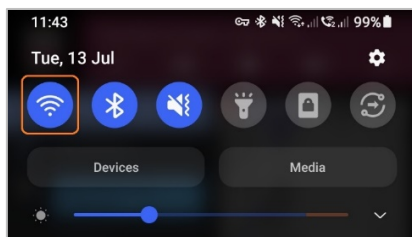

Student: john.smith@student.tafesa.edu.au or 012345678

or

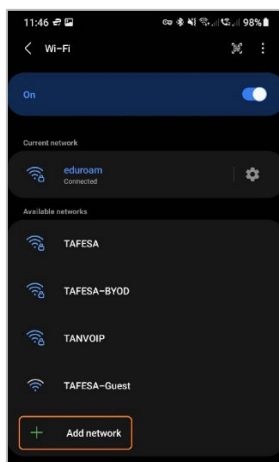

Staff: jane.smith@tafesa.edu.au or SmithJ

Android Phone or Tablet (11.0)

1. Ensure you are in range of TAFE SA Wi-Fi (for example, in the campus library or common student area).
2. Slide down the notification bar at the top of the screen, and press-hold the **Wi-Fi icon**.

3. On the Wi-Fi screen select **+ Add network**.

4. Enter the details as shown below or select field and then select **Connect** (Order might differ and not all are present on every version of Android).

- Network name - TAFESA-BYOD
- Security - WPA/WPA2/WPA3-Enterprise
- EAP method - PEAP
- Identity - Your TAFESA Username
- Password - Your TAFESA Password
- CA certificate - Use system certificates
- Online certificate status - Don't validate
- Domain - "tafesa.edu.au"
- Phase-2 authentication - MSCHAPV2

The screenshot shows the 'Add network' screen on an Android phone. The screen is dark-themed and contains several configuration fields, each with a label and a value. The fields are: Network name (TAFESA-BYOD), Security (WPA/WPA2/WPA3-Enterprise), EAP method (PEAP), Identity (USERNAME), Password (Enter password), CA certificate (Use system certificates), Online certificate status (Don't validate), Domain (tafesa.edu.au), and Phase 2 authentication (MSCHAPV2). The 'Advanced' section is expanded, showing the Phase 2 authentication options.

5. You should now be connected to the TAFESA-BYOD Wi-Fi network.
